

Color Tracking

Quick use

1. Power on DOGZILLA

First, we turn on the switching power supply of the mechanical dog and start the mechanical dog

After starting, we can view the IP address on the small screen of the robot dog.

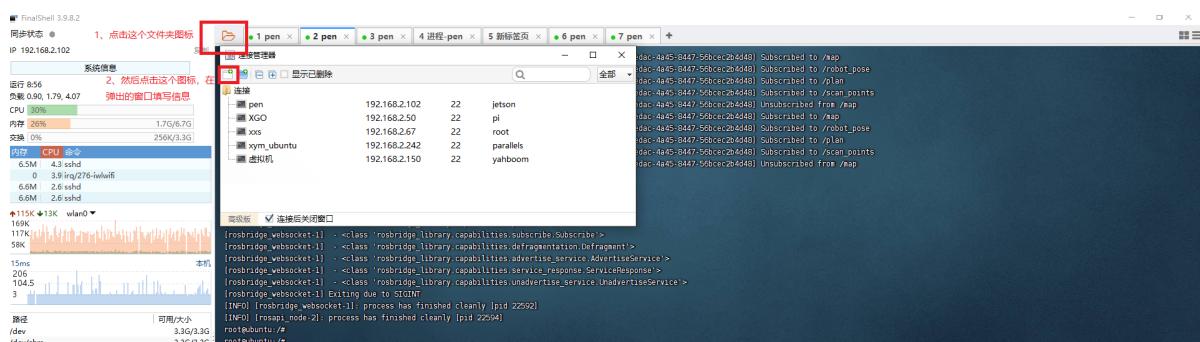

2. Start DOGZILLA chassis

PI4 version steps:

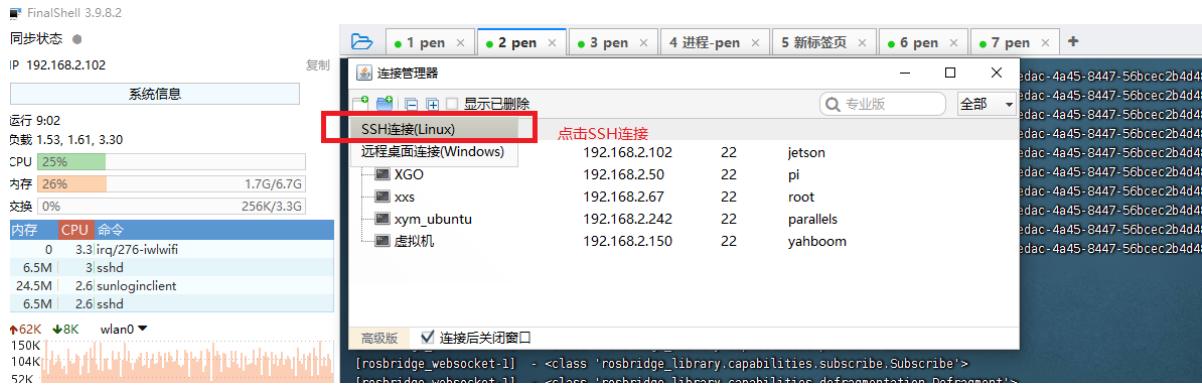

Then use the ssh terminal to connect to the robot dog.

Note: The IP address used when writing this tutorial: 192.168.2.102 User name: pi Password: yahboom The actual IP address shall prevail when used.

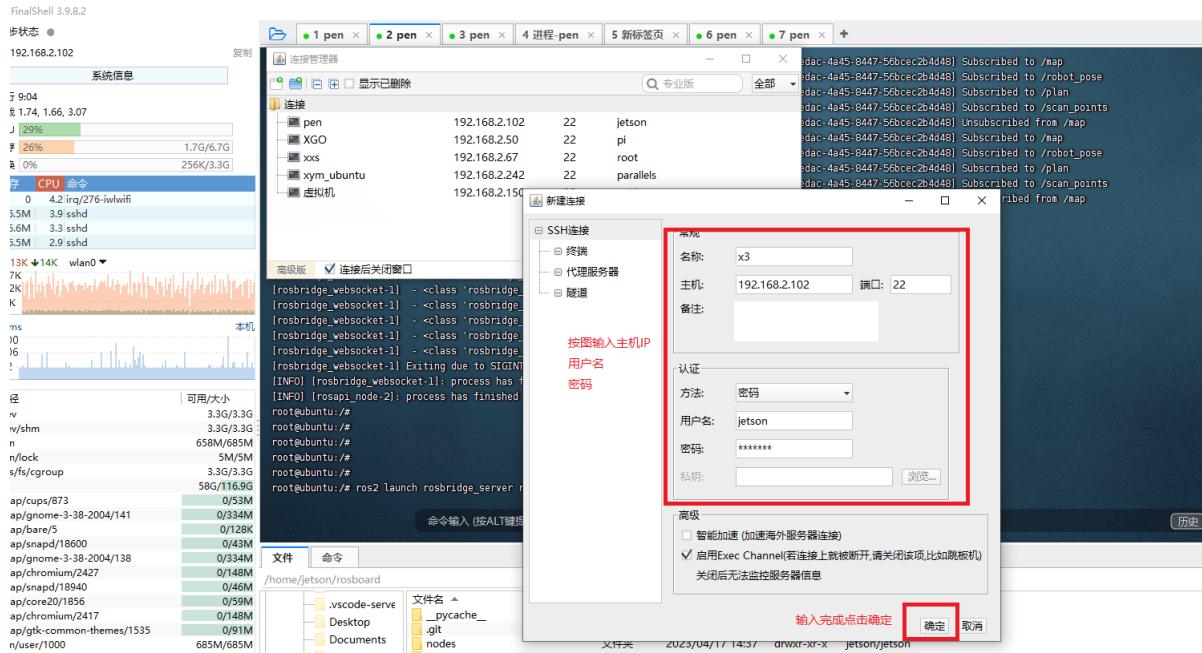

Open the shell tool. The shell tool I use here is FinalShell. Enter username, password, port, connection name and other information.

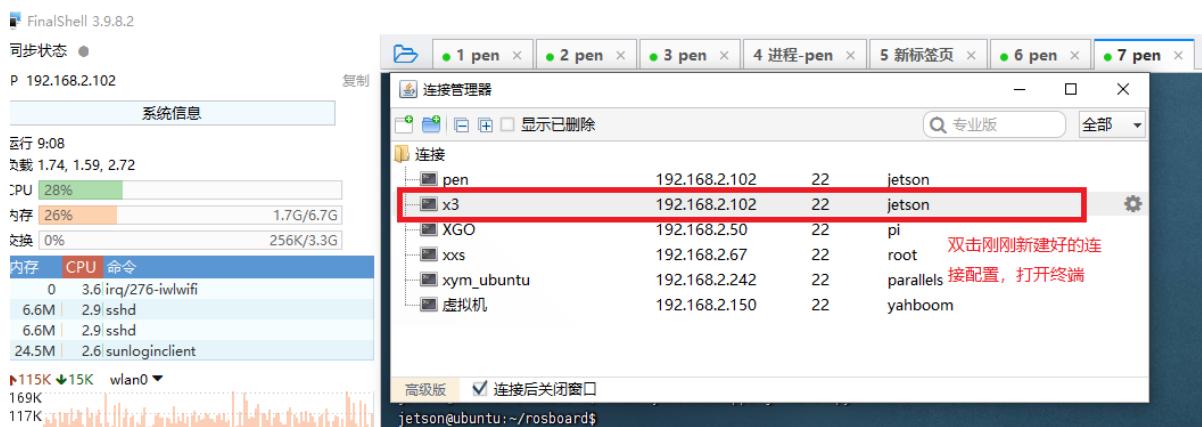

Select ssh connection to create a new ssh connection

Here the username is pi, the password is yahboom, and the ip address is the IP address of the real robot dog.

Select the ssh connection you just created here.

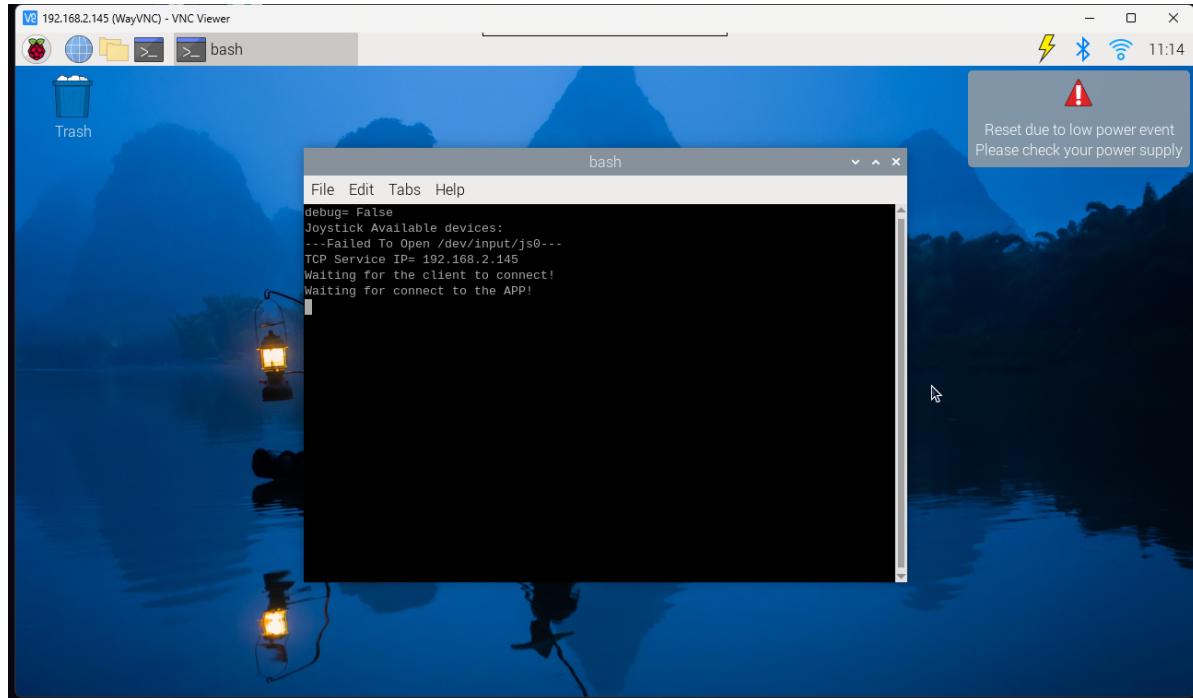

Enter the command in the terminal to start the chassis task.

```
sudo systemctl restart YahboomStart.service
```

```
pi@yahboom:~$  
pi@yahboom:~$  
pi@yahboom:~$  
pi@yahboom:~$  
pi@yahboom:~$ sudo systemctl restart XgoStart.service
```

PI5 version steps:

After the mechanical dog is started, use the vnc software to remotely connect to the mechanical dog through the IP address on the OLED (**For specific steps, please see "Remote Login Operation"**).

Then **ctrl+c** closes the large program and enter the following command to enter docker:

```
./run_humble.sh
```

```
TCP Service IP= 192.168.2.145  
Waiting for the client to connect!  
Waiting for connect to the APP!  
^CKeyboardInterrupt  
2024-04-28T10:17:27Z  
-----program end-----  
pi@raspberrypi:~ $ ./run_humble.sh  
access control disabled, clients can connect from any host  
root@raspberrypi:/#
```

Then enter the following commands in the docker terminal to start the car radar, imu, and mechanical dog joint status nodes.

```
ros2 launch bringup Navigation_bringup.launch.py
```

```

root@raspberrypi: /

```

3. Start the image publishing node

PI4 version steps:

Enter the following command in the terminal

```
cd cartographer_ws2/
```

```
source install/setup.bash
```

```

pi@yahboom:~$ cd cartographer_ws2/
pi@yahboom:~/cartographer_ws2$ 
pi@yahboom:~/cartographer_ws2$ 
pi@yahboom:~/cartographer_ws2$ source install/setup.bash
pi@yahboom:~/cartographer_ws2$ 
```

Then enter the following command

```
ros2 run yahboom_image_publisher_c yahboom_image_publish_c
```

```

pi@yahboom:~/cartographer_ws2$ source install/setup.bash
pi@yahboom:~/cartographer_ws2$ 
pi@yahboom:~/cartographer_ws2$ 
pi@yahboom:~/cartographer_ws2$ 
pi@yahboom:~/cartographer_ws2$ ros2 run xgo_image_publisher_c xgo_image_publish_c
[ WARN:0] global ..../modules/videoio/src/cap_gstreamer.cpp (1758) handleMessage OpenCV | GStreamer warning: Embedded video playback halted; mod
[ WARN:0] global ..../modules/videoio/src/cap_gstreamer.cpp (888) open OpenCV | GStreamer warning: unable to start pipeline
[ WARN:0] global ..../modules/videoio/src/cap_gstreamer.cpp (480) isPipelinePlaying OpenCV | GStreamer warning: GStreamer: pipeline have not bee

```

Restart a terminal in the same way as in item 2.

```
连接主机...
连接主机成功
Last login: Fri Jun 16 10:18:28 2023 from 192.168.2.64
pi@yahboom:~$
```

Enter the following command in a new terminal

```
cd cartographer_ws2/
```

```
source install/setup.bash
```

```
ros2 run yahboom_color_tracking yahboom_color_tracking
```

```
pi@yahboom:~$ cd cartographer_ws2/
pi@yahboom:~/cartographer_ws2$ source install/setup.bash
pi@yahboom:~/cartographer_ws2$ ros2 run xgo_color_tracking xgo_color_tracking
ddddddddd
```

PI5 version steps:

Enter in the root directory of the Raspberry Pi and enter the same terminal

```
docker ps
docker exec -it id /bin/bash
```

```
pi@raspberrypi:~ $ docker ps
CONTAINER ID        IMAGE               COMMAND      CREATED
STATUS             PORTS              NAMES
c06cd712e14e      yahboomtechnology/ros-humble:3.1   "/bin/bash"   24 minutes ago
Up 24 minutes          nice_keldysh
pi@raspberrypi:~ $ docker exec -it c06c /bin/bash
root@raspberrypi:/#
```

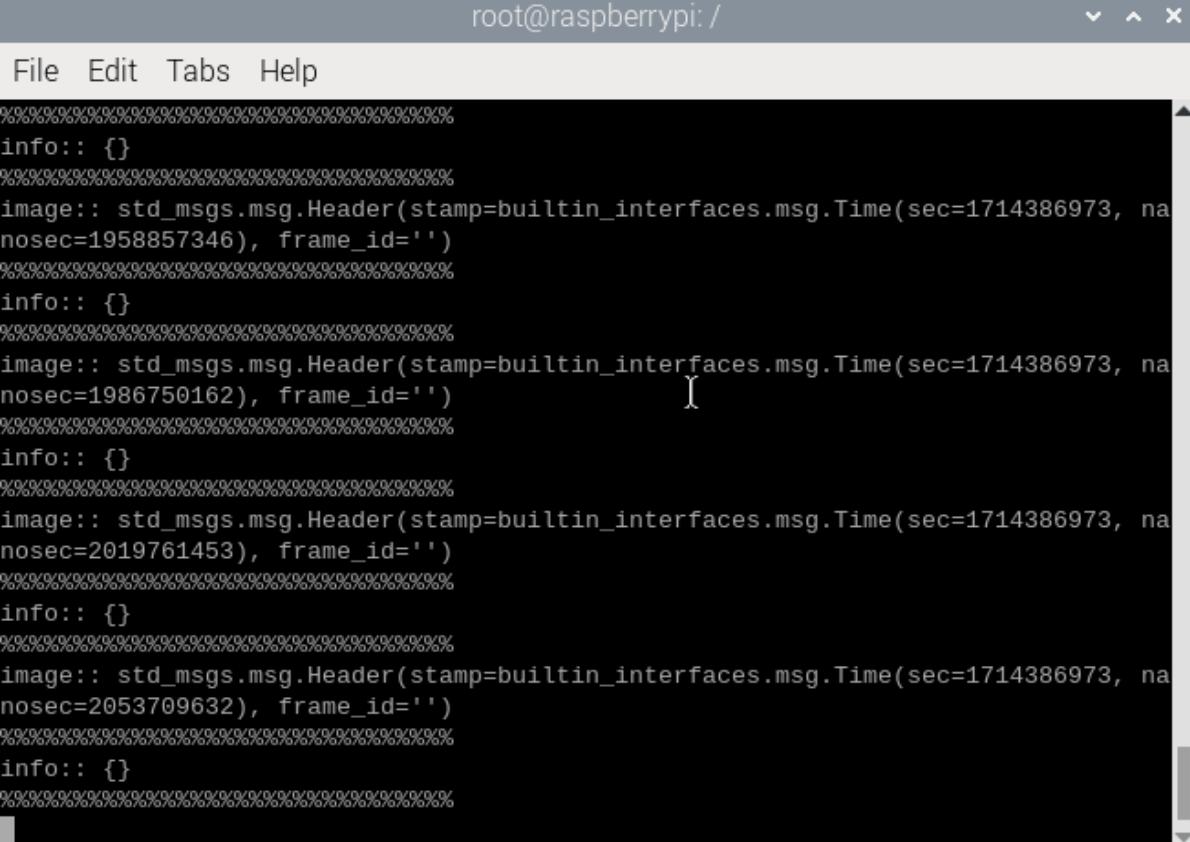

Then enter the following command

```
ros2 run yahboom_publish pub_color
```

```
root@raspberrypi:~# ros2 run yahboom_publish pub_color
[ WARN:0] global ./modules/videoio/src/cap_gstreamer.cpp (2075) handleMessage OpenCV | GStreamer warning: Embedded video playback halted; module source reported : Could not read from resource.
[ WARN:0] global ./modules/videoio/src/cap_gstreamer.cpp (1053) open OpenCV | GS treamer warning: unable to start pipeline
[ WARN:0] global ./modules/videoio/src/cap_gstreamer.cpp (616) isPipelinePlaying OpenCV | GStreamer warning: GStreamer: pipeline have not been created
```

Reopen the same docker terminal and enter the command:

```
ros2 run yahboom_qrcode_tracking yahboom_qrcode_tracking
```

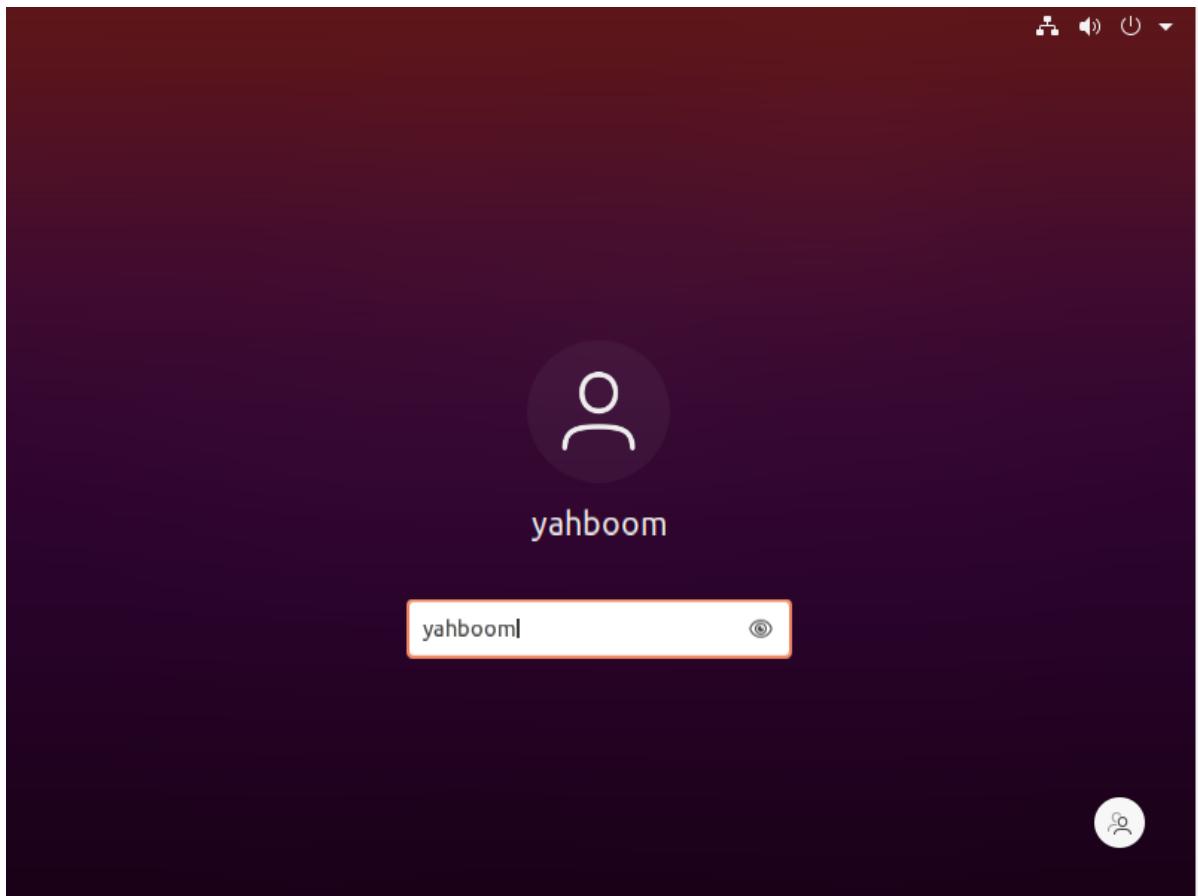

The screenshot shows a terminal window titled "root@raspberrypi: /". The window contains several lines of log output from the ROS 2 node "yahboom_qrcode_tracking". The logs are timestamped and show the node publishing images at regular intervals. The output is as follows:

```
info:: {}
image:: std_msgs.msg.Header(stamp= builtin_interfaces.msg.Time(sec=1714386973, nanosec=1958857346), frame_id='')
info:: {}
image:: std_msgs.msg.Header(stamp= builtin_interfaces.msg.Time(sec=1714386973, nanosec=1986750162), frame_id='')
info:: {}
image:: std_msgs.msg.Header(stamp= builtin_interfaces.msg.Time(sec=1714386973, nanosec=2019761453), frame_id='')
info:: {}
image:: std_msgs.msg.Header(stamp= builtin_interfaces.msg.Time(sec=1714386973, nanosec=2053709632), frame_id='')
info:: {}
```

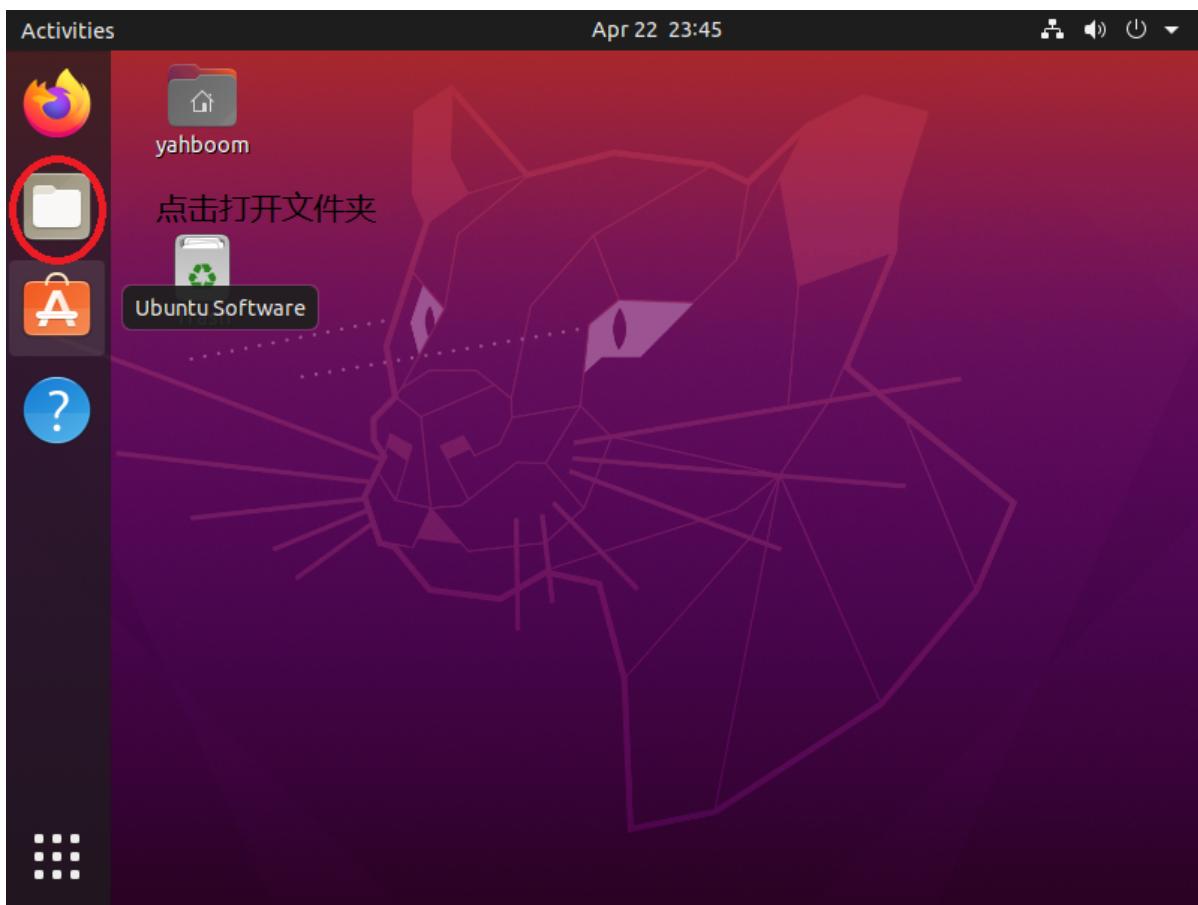

5. Set the recognition color through the web interface

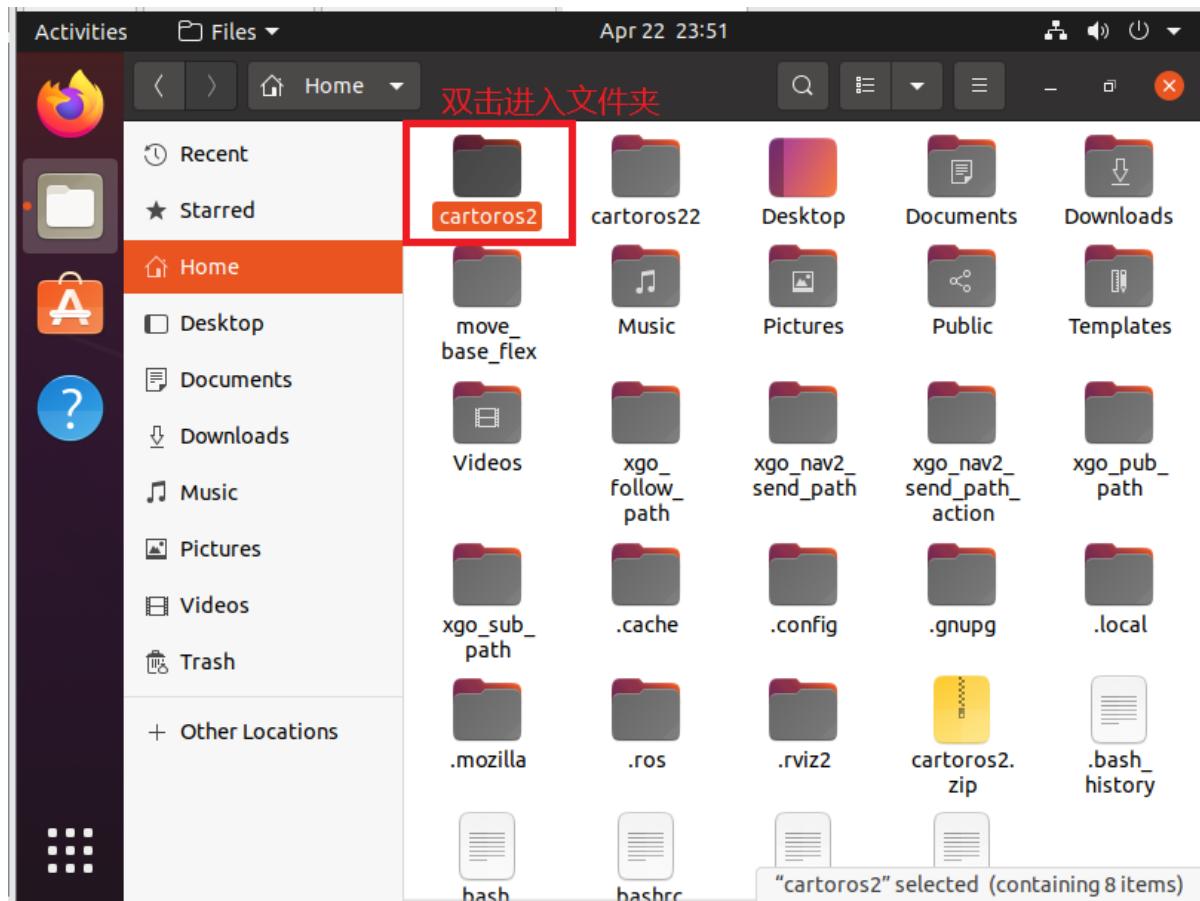

The steps are the same for PI4 and PI5 versions:

Open the virtual machine and enter the user name yahboom and the password yahboom.

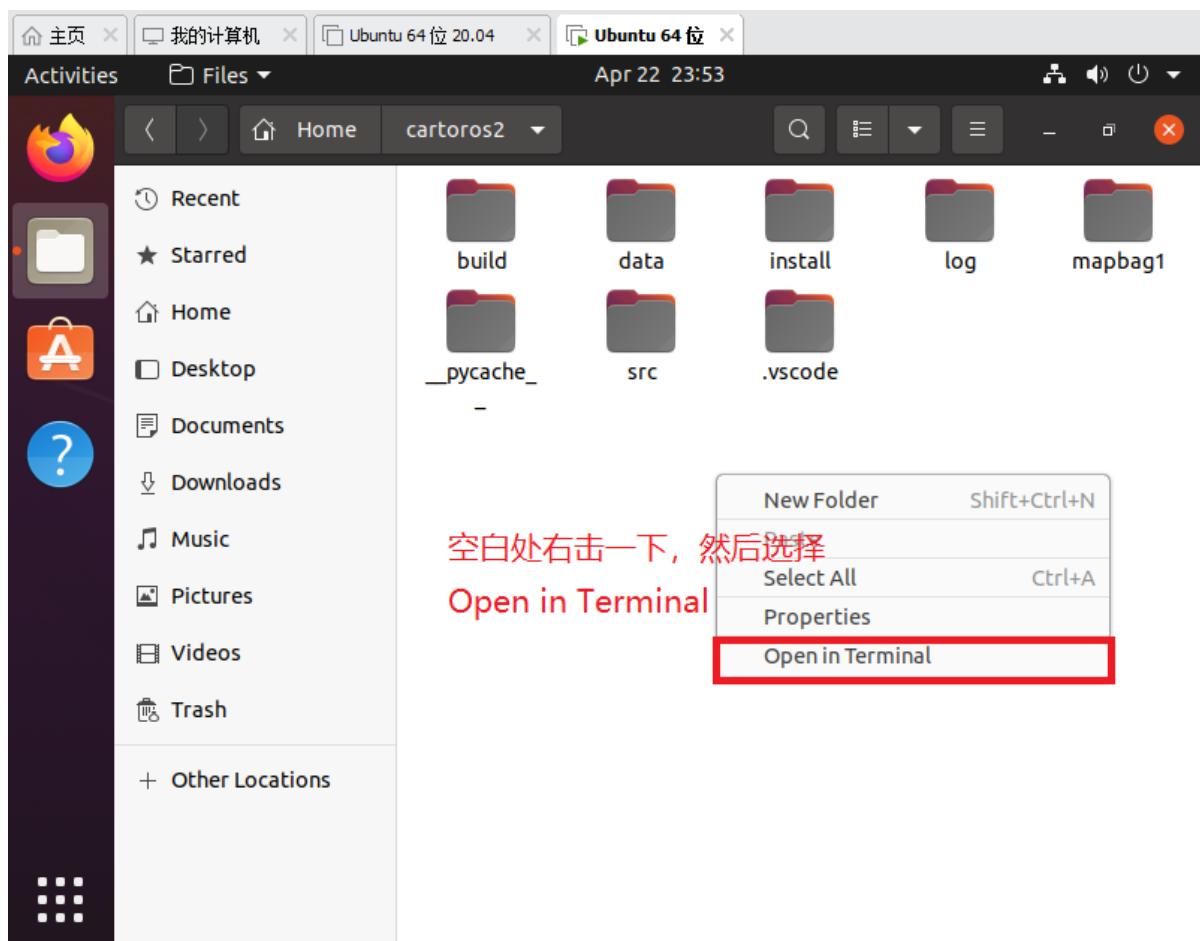

Click on the folder to open the cartoros2 folder.

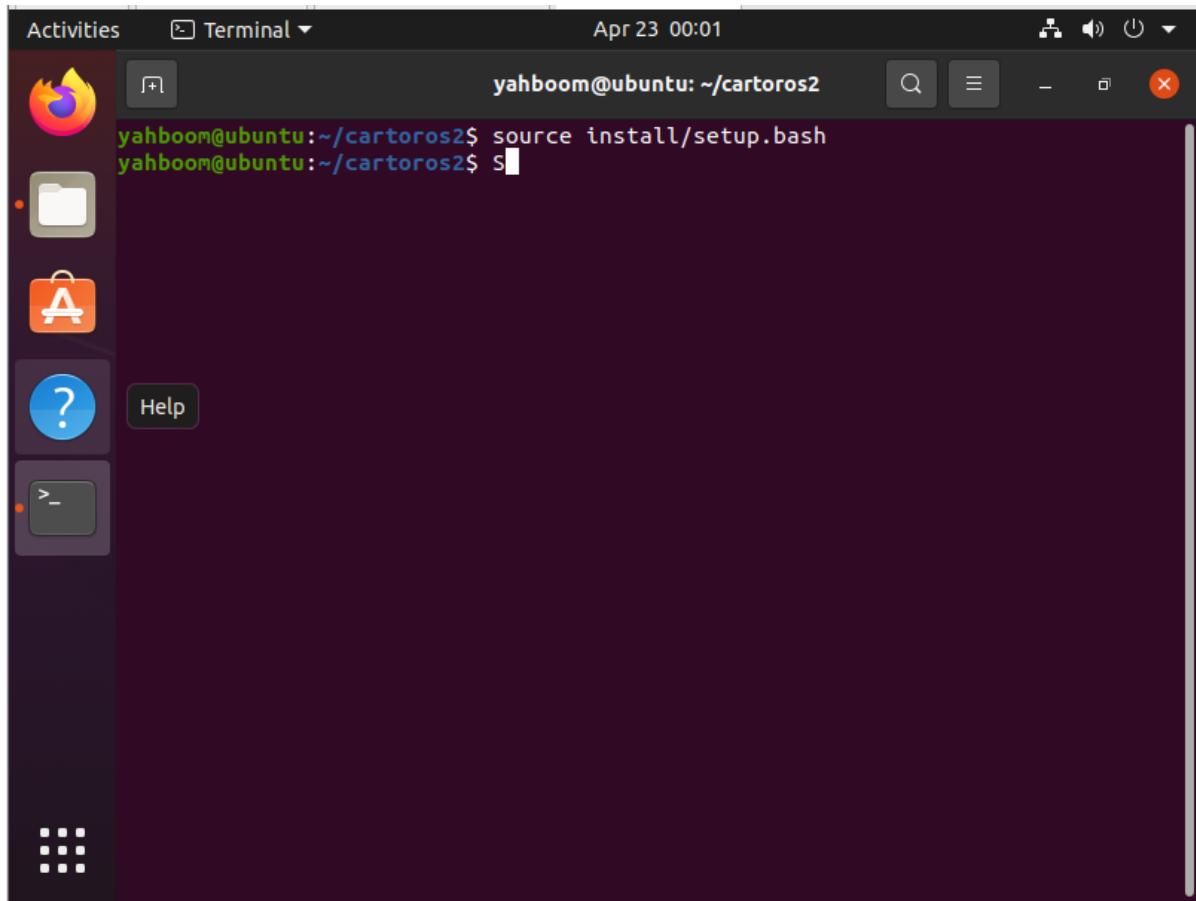

Open the terminal under the folder

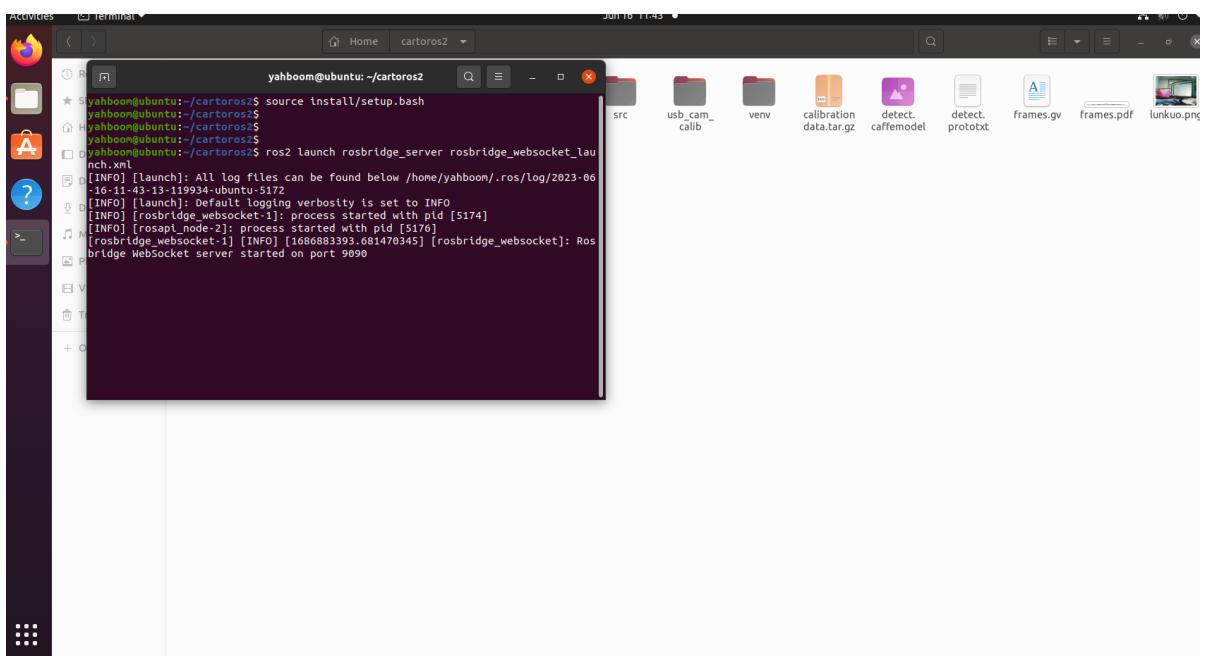

Then enter the following command

```
source install/setup.bash
```

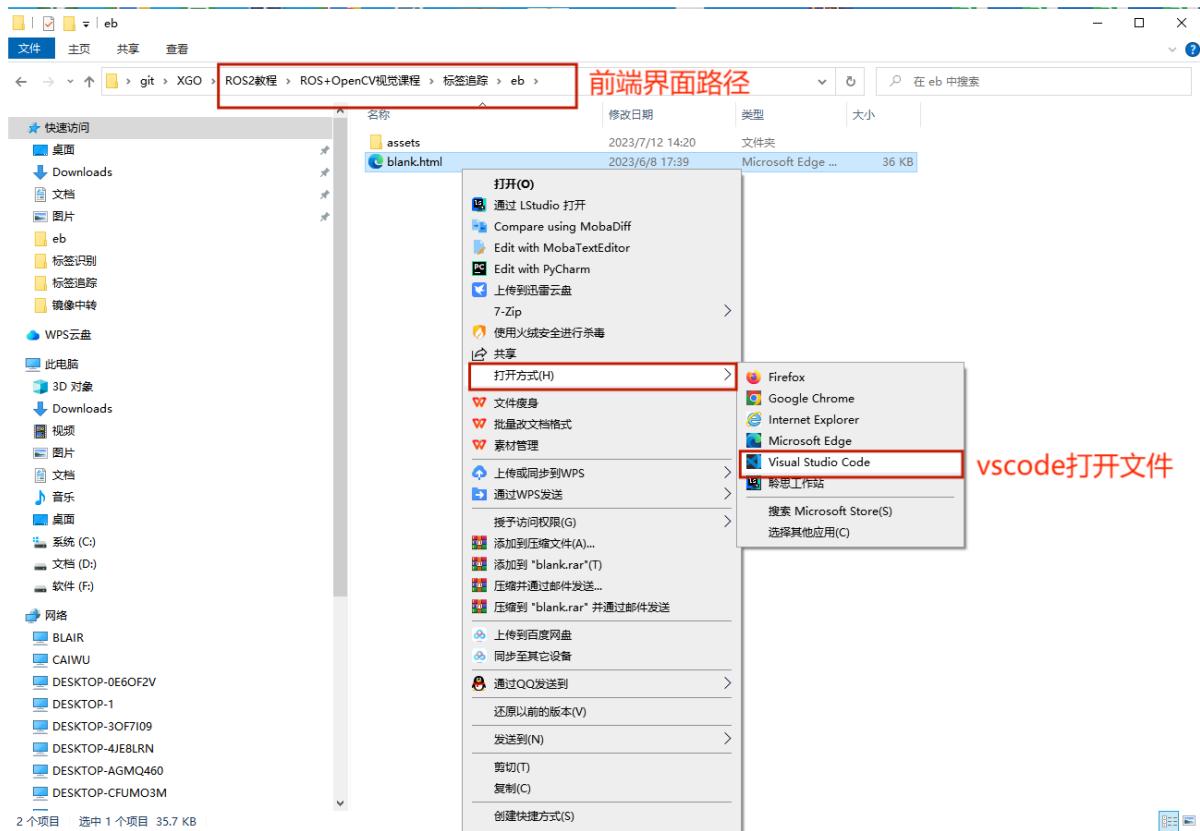

Then start rosbridge and enter the following command

```
ros2 launch rosbridge_server rosbridge_websocket_launch.xml
```

Find the blank.html file in the eb folder in the updated directory of this tutorial and open it with Google Chrome.

Note: The IP address of rosbridge needs to be set here. Obtain the IP address of the virtual machine, then open the blank.html file, modify the IP address of line 363 and save it, as shown in the figure below.

```
var ros = new ROSLIB.Ros({
  url : 'ws://192.168.2.117:9090'
});

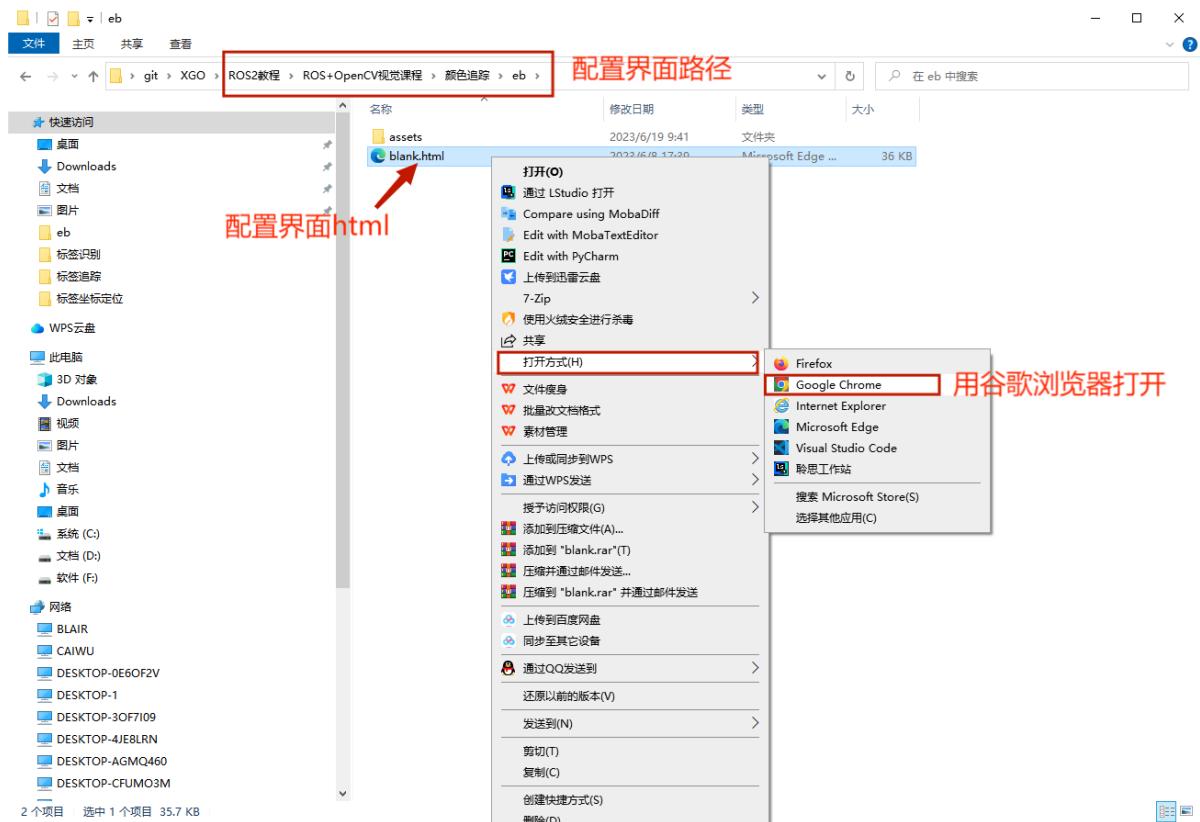

ros.on('connection', function() {
  console.log('Connected to websocket server.');
});

ros.on('error', function(error) {
  console.log('Error connecting to websocket server: ', error);
});

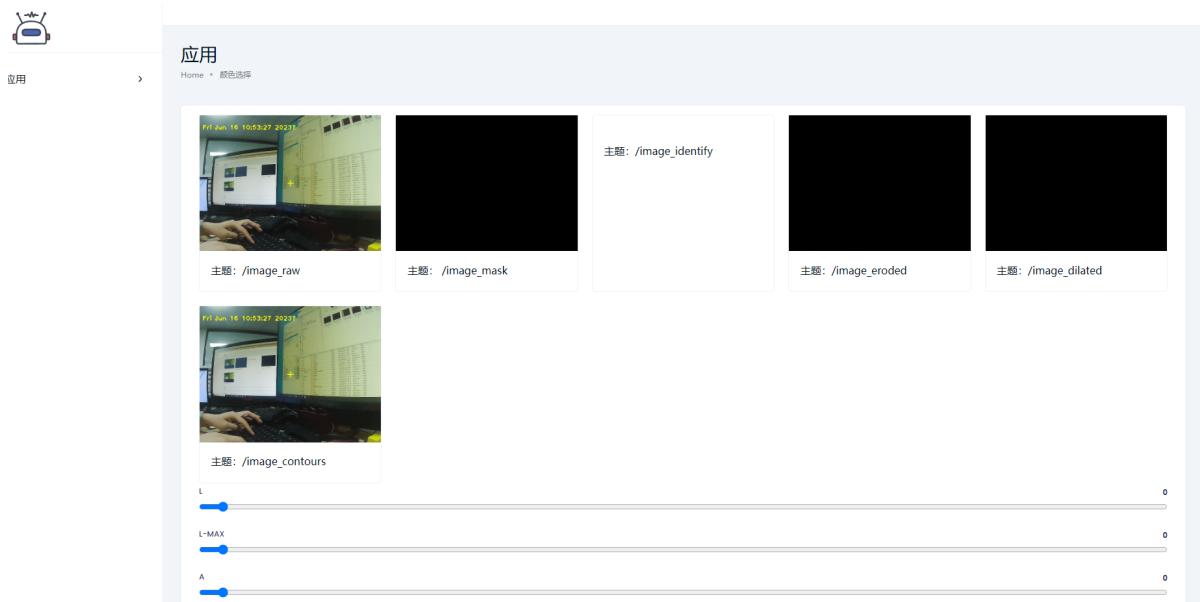

ros.on('close', function() {
  console.log('Connection to websocket server closed.');
});

var imageLisener_compressed= new ROSLIB.Topic({
  ros : ros,
  name : '/image_raw/compressed',
  messageType : 'sensor_msgs/msg/CompressedImage',
  throttle_rate : 100
});
var that = this;
imageLisener_compressed.subscribe(function(data) {
  // update the robot's position on the path
});
```

修改这里的IP为实际rosbridge的的IP地址

As shown in the picture below, you can see the pictures transmitted by the camera.

Then we set the LAB value of the color through the slider.

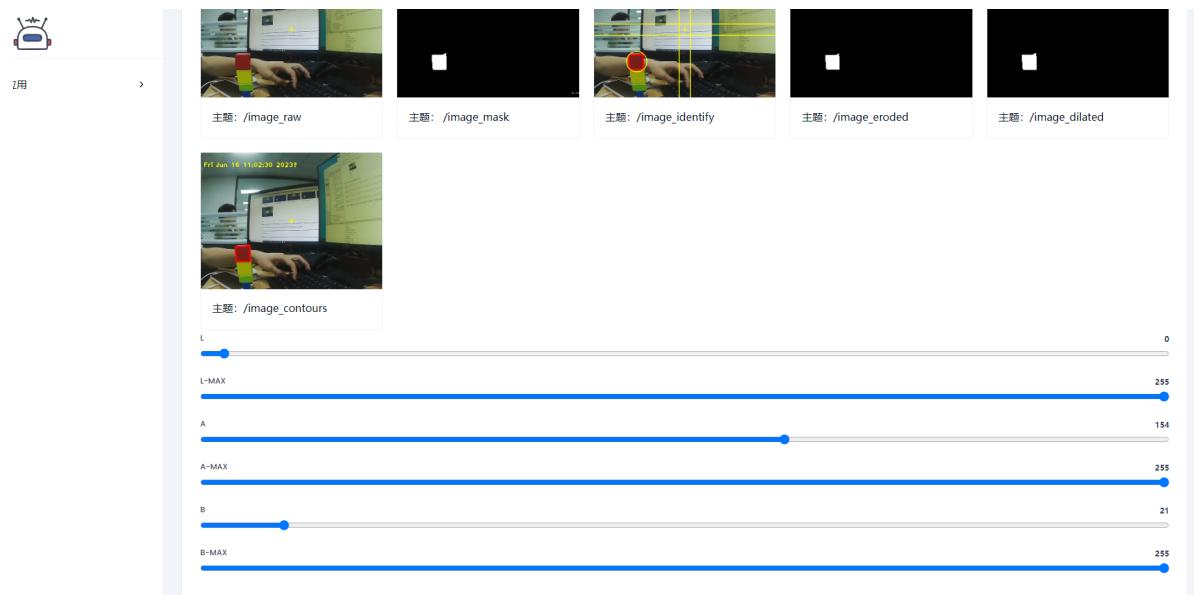

```
Yellow: {"l":96, "a": 55, "b":188, "l_max": 252 , "a_max": 141, "b_max": 255}
```

```
Red: {"l":0, "a": 155, "b":21, "l_max": 255 , "a_max": 255, "b_max": 255}
```

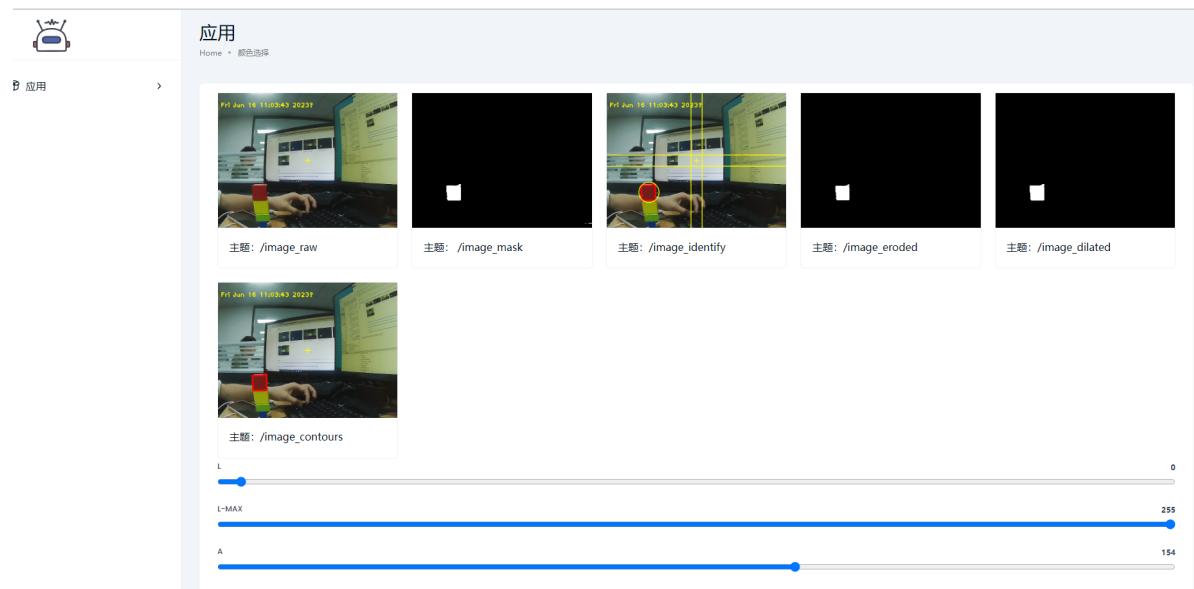

```
Green: {"l":26, "a": 7, "b":170, "l_max": 143 , "a_max": 110, "b_max": 255}
```

```
Blue: {"l":0, "a": 0, "b":0, "l_max": 255 , "a_max": 255, "b_max": 102}
```

Above are the LAB values of several colors. We can choose one to set. For example, we set red, as shown in the figure below, and move the slider.

In the picture we can see that the red square has been identified.

Then the mechanical dog will adjust its attitude so that the red block is near the center of the screen.
